

QUEER EXPERIMENTS

with

TECHNOLOGIES

created by  
Katy Dadacz  
&

Harriet Horobin-Worley

welcome

this zine is an archive of a  
two day event exploring queer  
technologies  
in bristol, UK.

the event was shaped around  
the questions below.

how do we make sense of the  
technologies around us through  
creative practices and queer  
insights?

what does it mean to queer  
technology and imagine a world  
otherwise?

ran by katy dadacz and fran  
bentivegna, designed with  
control shift. with artist  
workshops by harriet horobin-  
worley, MELT and yudi wu.

The image shows a screenshot of a text editor interface with a dark theme. The main editing area contains text in a monospaced font. A right-hand sidebar is open, displaying various text formatting options. The sidebar includes sections for 'Text', 'Font', 'Character Styles', 'Text Colour', 'Spacing', and 'Bullets & Lists'. The 'Text' section shows 'Body\*' selected. The 'Font' section shows 'Courier New' and 'Regular' selected. The 'Character Styles' section shows 'None' selected. The 'Text Colour' section shows three color swatches. The 'Spacing' section shows 'Lines' selected. The 'Bullets & Lists' section shows 'None' selected.

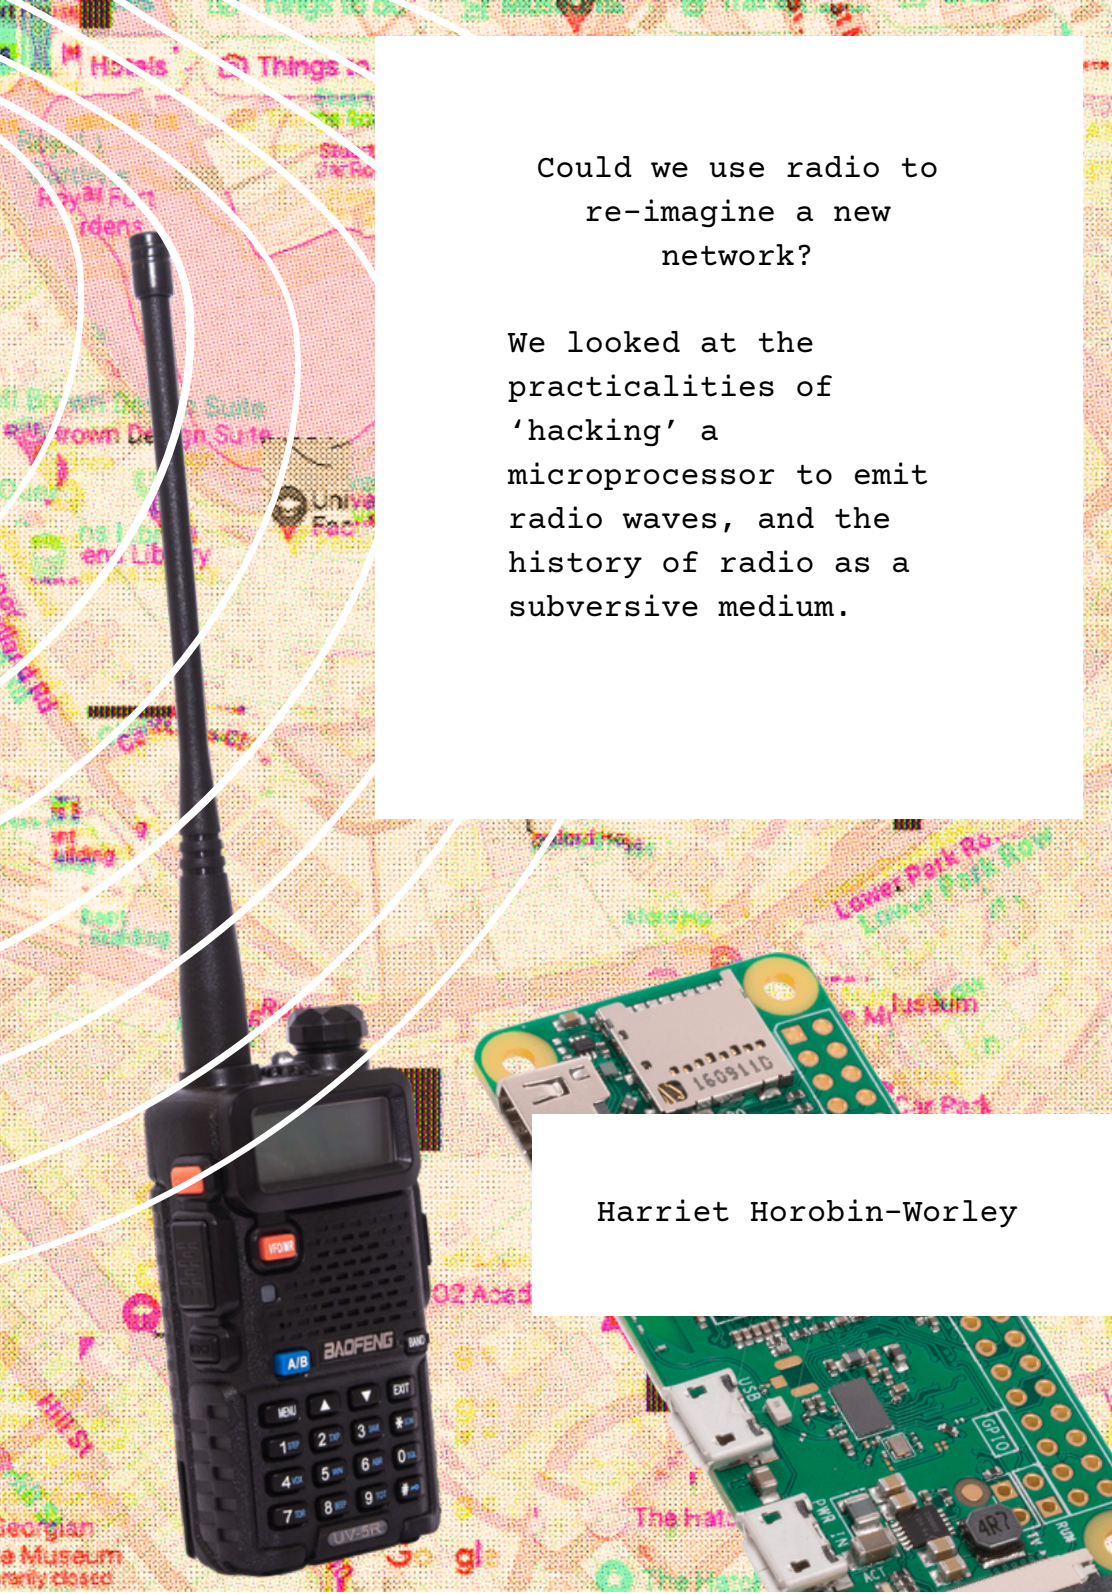

Sound and Vision:  
Building our own networks

Can we make visible the  
infrastructure that  
holds us?

We explored the complex  
web of connections that  
brought us to the  
workshop and talked  
about the  
infrastructure that  
enables those  
connections. Word of  
mouth, universities,  
WhatsApp groups.

Could we use radio to  
re-imagine a new  
network?

We looked at the  
practicalities of  
'hacking' a  
microprocessor to emit  
radio waves, and the  
history of radio as a  
subversive medium.

# Methods/ dsotem with MELT

## reimagining workshops and materials

104 - When have you felt safe in spaces and what made it so?

105 embodiment in space, who are the people in the room, being safe is not always about not being danger, the sense of being the space without needing to explain yourself/ 'apologise' in a way for being different

106  
107 In the invitation itself on a watershed event, there was consent culture mentioning, they said it was space, queer friendly, and they would not tolerate discrimination etc.

108  
109 - What makes collective conditions different from a code of conduct? What is similar?

110 Code of conduct feels more hierarchically imposed (top->down).

111  
112 Collective conditions do not necessarily include hierarchical structures. They are created and constant the collective.

113  
114 both set a framework- rules to follow, shape behaviour and dynamics

115 - When have you felt great in collaborations? What made it so?

116 When collaborations have emerged out of friendships. Groundwork needed to set up good collaborations.

117 Made a friend out of collaborating with someone rather than being friends first.

118 Care relations, being invested in the people you're collaborating with.

119 To have positive collaboration its important to have understanding of who you're collaborating with.

120 Is friendship a requirement for good collaboration? Or is it a symptom? It is some sort of companionship. Maybe friendship is a reductive word, more like comradeship?

121 Sharing a home, collaborate to make a home, not all of them friends - more of collaborative friendships - collaboration and friendship - a situational friendship?

122 intellectual companionship, trust and respect

123 companion // colleague

124 we're not best friends but we have a relational mutual understanding

125 peer - doesn't have the same institutional vibe perhaps as colleague

126  
127 - What are the biggest challenges that you experience in collaborative projects or collectives?

128 any sense that I might be in possession of some ultimate truth

129 the outcomes have to be collaborative -

130 one person thinking they are better in some way often leads to a negative experience

131 one person thinking they are better in some way at presenting themselves

132 disparity in terms of capacity, logistical issues based on differing needs

133 institutions can help connect people or get in the way

134 hierarchies in institutions - between people who are having permanent contracts at a Uni / vs. freelance worlds power difference that comes between length of time you've been there, and have to do shit work

135 language is such an interesting part of collaboration - how can you understand

136 being honest about capacity, to make sure there's equitable distribution of work/tasks etc.

137 skillsets can be placed along such loaded lines of privilege

138 people who are working on things because they get stuck with them, not because they want to

139 if you wanted to do lighting stuff (for example), would there be space for you to learn?

140  
141 - What are practices that help make decisions in collectives? From our practice as MELT, we can share the method of "talking about things at least twice". This can take a lot of pressure out of the decision making process & provide time to form a strategy together.

142 in the context of writing a script: having a bunch of materials, some outside - newspaper articles, some of which are generated by a variety of contexts within the team, using those words and generating a script, a variety of voices are included

143 having trust in the people, trust that people will do them with their own skills, expect certain things from people without giving them space without doing them how they could work

144 -- if you are not doing the same of teaching someone, its wrong - trust and give space for difference

145 -- voting feels important, but very rarely works in practice

146 -- want to get to the same thoughts - values

147 - political organising - there is a kind of wittling down of ideas to debate or discussion

and everyone  
saw a his

#### Banana skin:

The banana skin is both tough and soft, as it exists to protect the nourishing insides enough for the banana to be transported across the world, but is soft and breakable enough for a person to easily open and eat the banana. Every touch it feels from the moment it is plucked leaves a trace upon it, which sometimes bloom into dark bruises. It can have a second role once it's been peeled, to nourish the earth in compost, but many are discarded in waste environments where they will degrade and their material comes to an end.

## Metal:

I can provide strength and security, protection and power. You can stretch me into wires, solder me to others or bend me into any shape imaginable.

# creative responses from participants

made by Yudi Wu

a tamagotchi, on the screen  
an 8-bit image of  
stereotypical "girl", the  
girl move vertically (in  
flossing dance motion) to a  
sofa, machine beeps while the  
girl moves, girls sits down  
on sofa, machine make up-tone  
victory sounds, confetti  
shows up.

who controls the waves? Is violence interrupting someone's  
message or is it the privatisation of collective  
resources- (of the world?)

Feel the words, if they get to you. Can you hear them?  
We're all here. We're all here.

# how can take VTubers take part in local regeneration and queer community activism?

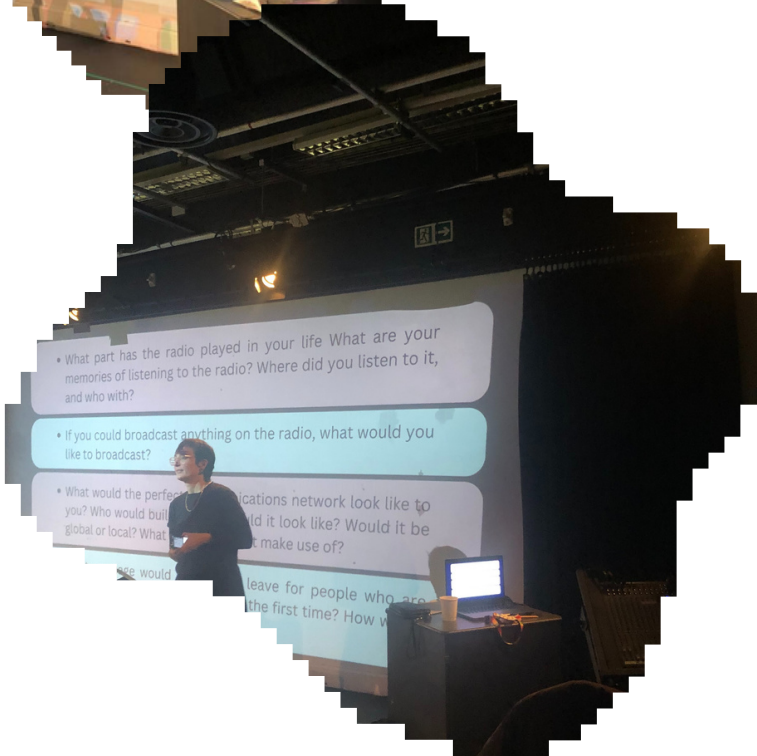

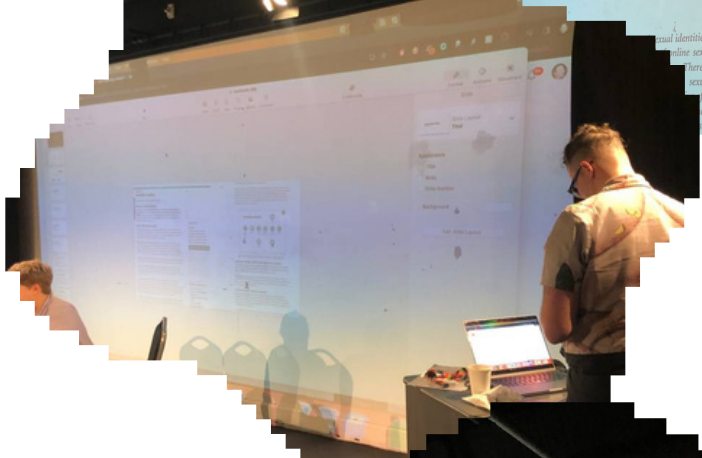

led by Yudi Wu

meet Geniune. they are a queer elder looking out for the digital community and those AFK (away from keyboard)\*.

they have purple hair, green skin, glasses, wrinkles, a purple fluffy tail. they wear a jumper and shorts that look like ice cream melting.

\*AFK is a term introduced by Legacy Russell in *Glitch Feminism* (2020). She criticises the online/offline binary; the virtual and actual seep into each other.

## OPEN FORUM

We reflected on the necessity to interweave community organising with workshop practices. Attending the trans pride march before the event set up the way participants engaged with each other. Thinking within an institution is often detached from what is happening everywhere else. Activism is an important pedagogical practice and should not be left once you enter an institutional space. At the same time, for our next events, we will think of other forms of community organising other than marches that offer more accessibility.

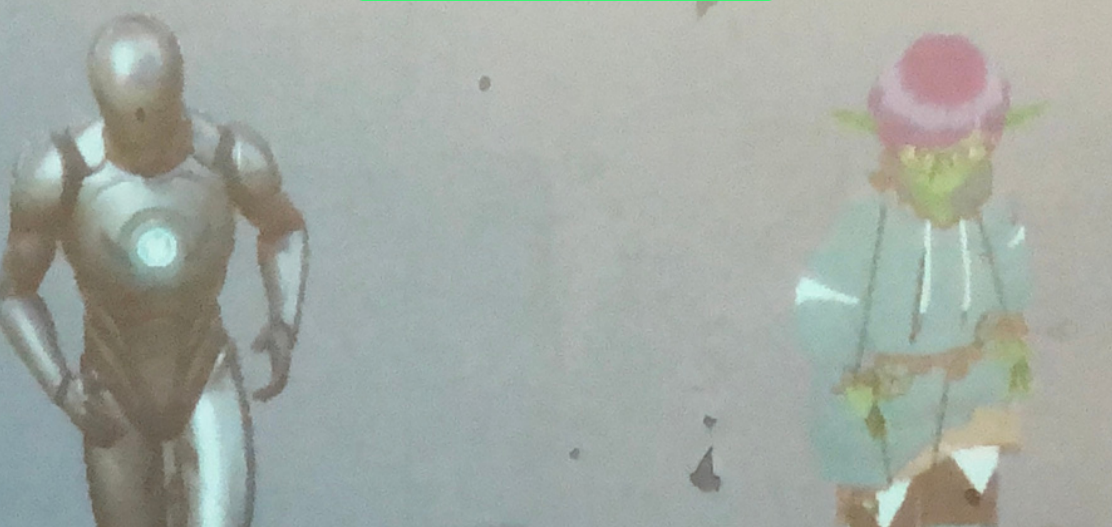

By framing the events, those interested in coming know what to expect and feel safe knowing it is a queer space for queer people. The importance of bonding as queer people in these spaces was also explored. By drawing boundaries, shielding or closing things in, as queer people we don't have to 'explain things' in the same way as we have implicit knowledge of our experiences.

We discussed how tech has an implicit barrier for socially engaged practice; this event challenged this by beginning with the social/interests/desires, and then turned to technologies as ways to shape this.

Then, we can ask the question; what do we need from this space? Companions, resources, community etc. That way we frame the events with the knowledge that we are the audience in mind. As well as building capacities for imagining, the group felt more agency will be developed through learning skills and making things together, for example DIY practices. In these collective spaces, we can learn, play and make.

A key question that arose; what will serve us and what will exploit us? The event was ran at the university of bristol. A participant raised an important point about addressing the feeling of being aware that we are doing queer experimentation within this context (institutional ties with oppressive organisations and states). Further, we want dismantles the hierarchy in which the 'saviours' of the university swoop in to help the queer community.

A response to this question was found in the importance of setting intention. What is the intention of each event? Of each workshop? Of each space? Through consent based practice, we can offer tiered layers of intentional ways of sharing. Further, the event organisers must think about the ongoing context- map out an ongoing arch for who is responsible in order for values to be maintained. This is a process of making us responsible in different roles, to keep each other safe and cared for.

# resource/reading list

We will be growing this resource list on our soon-to-be website. At the moment, you can find it here..

<https://padlet.com/dadaczkaty/queer-tech-reading-list-eh7ydhww0kggtxf>

thank you to all the participants for your  
care, your critical creativity and your  
queer imaginings.

included in these zines are scans of  
paintings done by a live illustrator  
over the course of the event by  
Carrot. find them on insta @carr0000t

we will be running more events, building  
a website and growing our community.
